

Chapter 9 Bivariate statistics: the basics

1) What are bivariate statistics?

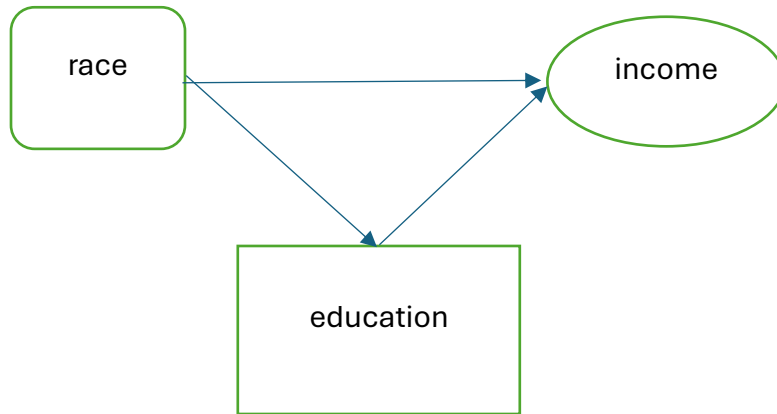

Bivariate statistics involves two variables: one is the independent variable, and the other is the dependent variable.

- A) Attendance, grade
- B) LSAT, Law school admission
- C) Exercise, BMI
- D) Education, income
- E) Driving, insurance premium

2) Causality

- A) Independent variable must predate the dependent variable
- B) The relationship must be non-spurious

- C) The relationship must be significant ($P < .05$)

3) Direction of the relationship

Positive relationship
